1. Selenium Test

Selenium è un framework portatile per testare le applicazioni web. Selenium offre uno strumento di riproduzione per creare test funzionali senza la necessità di imparare un linguaggio di scripting di test (Selenium IDE). Fornisce inoltre un linguaggio specifico del dominio di prova (Selenese) per scrivere test in numerosi linguaggi di programmazione popolari, tra cui C #, Groovy, Java, Perl, PHP, Python, Ruby e Scala. I test possono quindi essere eseguiti con la maggior parte dei browser Web moderni. Selenium funziona su Windows, Linux e macOS. È un software open source rilasciato con licenza Apache 2.0.
